Tabela I: Distribuição Normal Padrão Acumulada

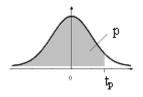

Fornece $\Phi(z) = P(-\infty < Z \le z)$, para todo z, de 0,01 em 0,01, desde z = 0,00 até z = 3,59 A distribuição de Z é Normal(0;1)

| Z | 0,00 | 0,01 | 0,02 | 0,03 | 0,04 | 0,05 | 0,06 | 0,07 | 0,08 | 0,09 |

Obs.: Para um certo ν fixado, se p < 0,50, $t_{\rm p}$ = - $t_{\rm 1-p}$.

Tabela IV: Distribuição Qui-Quadrado

Fornece o quantil χ^2_p em função do nº de g.l. ν (linha) e de p = P($\chi^2 \le \chi^2_p$) (coluna). χ^2 tem distribuição qui-quadrado com ν g.l.

Tabela III: Distribuição F de Fischer-Snedecor

Fornece os quantis $F_{0,95}$ (em cima) e $F_{0,99}$ (em baixo) em função do nº de g.l. numerador v_1 (coluna) e do nº de g.l. denominador v_2 (linha) F tem distribuição F com v_1 g.l. no numerador e v_2 g.l. no denominador V_1 (coluna) e do nº de g.l. denominador V_2 (linha) V_3 (coluna) e do nº de g.l. V_4 (coluna) e do nº de g.l. V_4 (linha) V_4 (coluna) e do nº de g.l. V_4 (coluna) e do nº de g.l. V_4 (linha) V_4 (coluna) e do nº de g.l. V_4 (coluna) e do nº de g.l. V_4 (linha) V_4 (coluna) e do nº de g.l. V_4 (coluna) e do nº de g.l. V_4 (coluna) e do nº de g.l. V_4 (linha) V_4 (coluna) e do nº de g.l. V_4 (coluna) e do nº d

Obs.: O quantil F_p correspondente a v_1 g.l. no numerador e v_2 g.l. no denominador coincide com o inverso do quantil F_{1-p} correspondente a v_2 g.l. no numerador e v_1 g.l. no denominador.
